**HURRAY!** - We are excited to announce that the Professional Training Centre of the PMAWCA in the Gulf of Guinea has selected SRS, in collaboration with ICGG/ACL, to support Member Ports in developing a Digital Port Solution for ports in the Gulf of Guinea.

The selection was based on the data-set availability, such as the data quality, it's flexibility in data interchange and competitive pricing model. The digital port solution will incorporate the enhanced SRS eFAL platform (eFAL++) which includes data sets of the IMO FAL Convention, the SOLAS convention, The MARPOL Convention and the Vessel Cargo Manifest.

With an integration to the Port Information System (PMIS) it will enable seamless data interchange between different systems within a national port community, as well as internationally. The combined platform will provide unified sets of maritime data, and further enhance transparency and efficiency at ports.

One major port will be leading the way by the end of this year (2020) to on-board the SRS eFAL++. We look forward to more ports joining in 2021 and making it the preferred digital port solution for African Ports.
